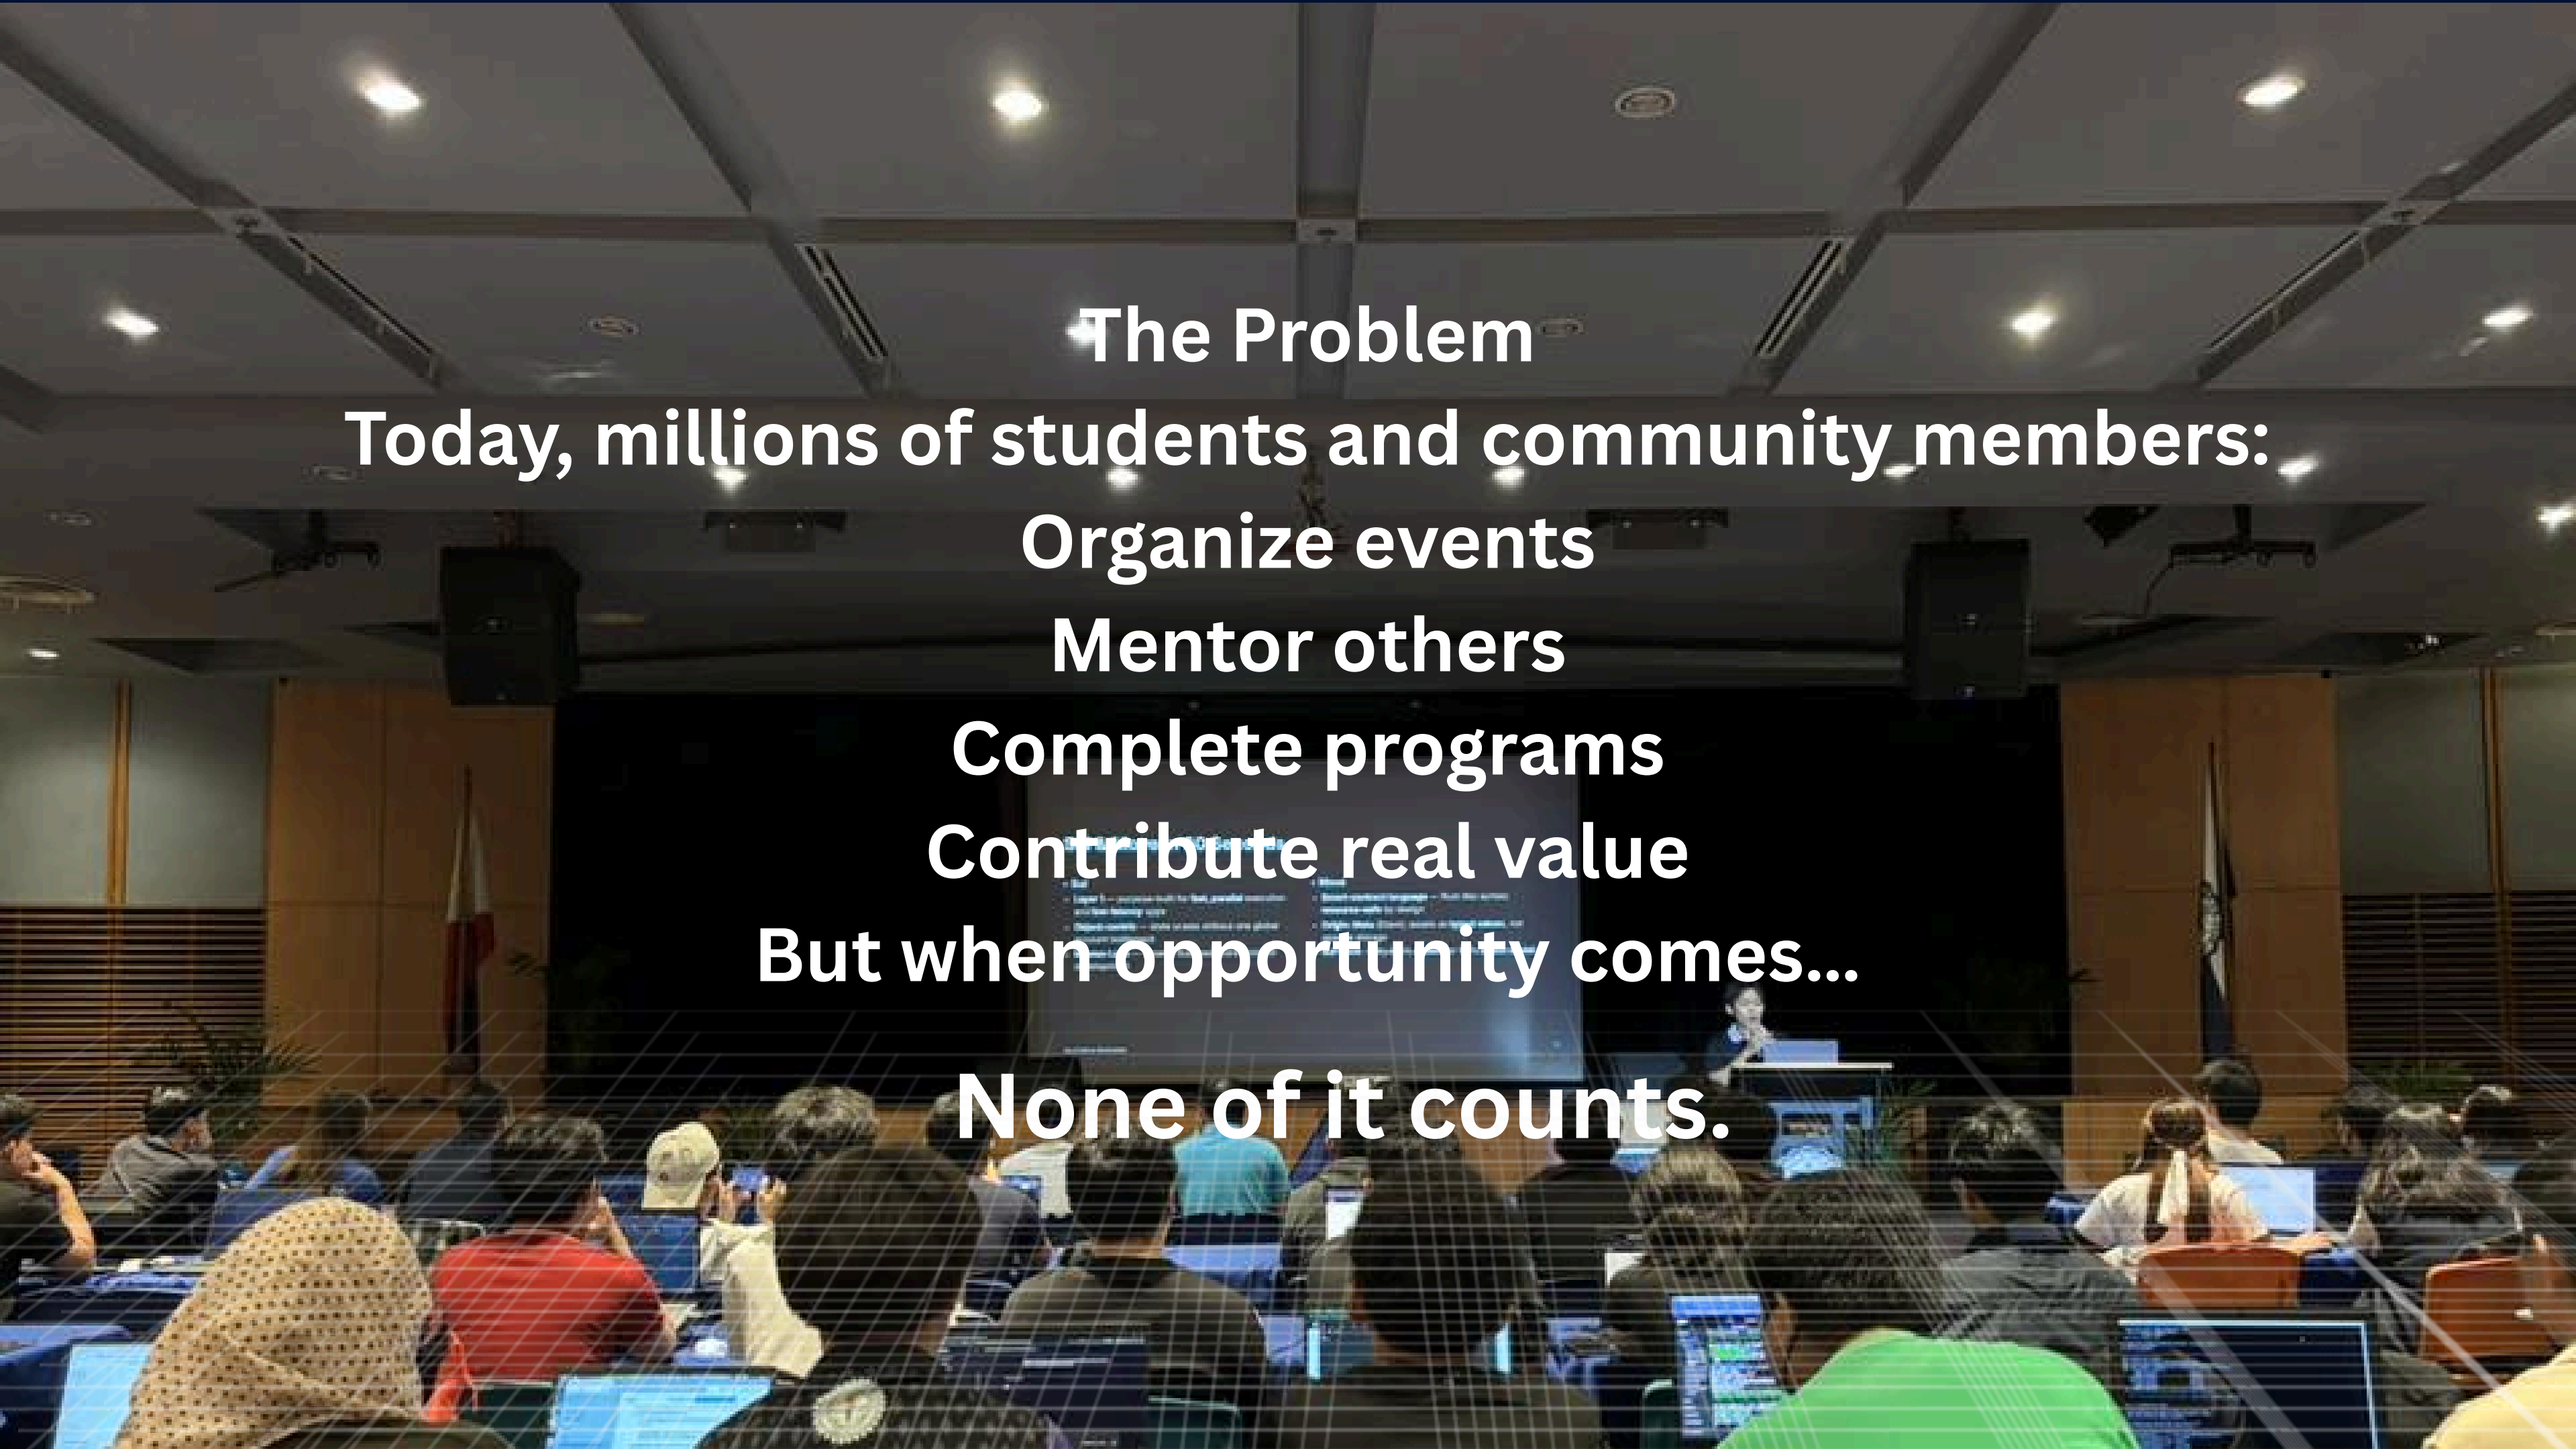
“Some proofs **vanish**. Others live **forever.**”



The Problem

Today, millions of students and community members:

Organize events

Mentor others

Complete programs

Contribute real value

But when opportunity comes...

None of it counts.

Why?

CVs are easy to fake

Proof is scattered or lost

Verification is slow or impossible

Employers rely on trust… not truth

We are living in a world where real work has no portable proof.

We’re building a new kind of truth layer for human contribution.

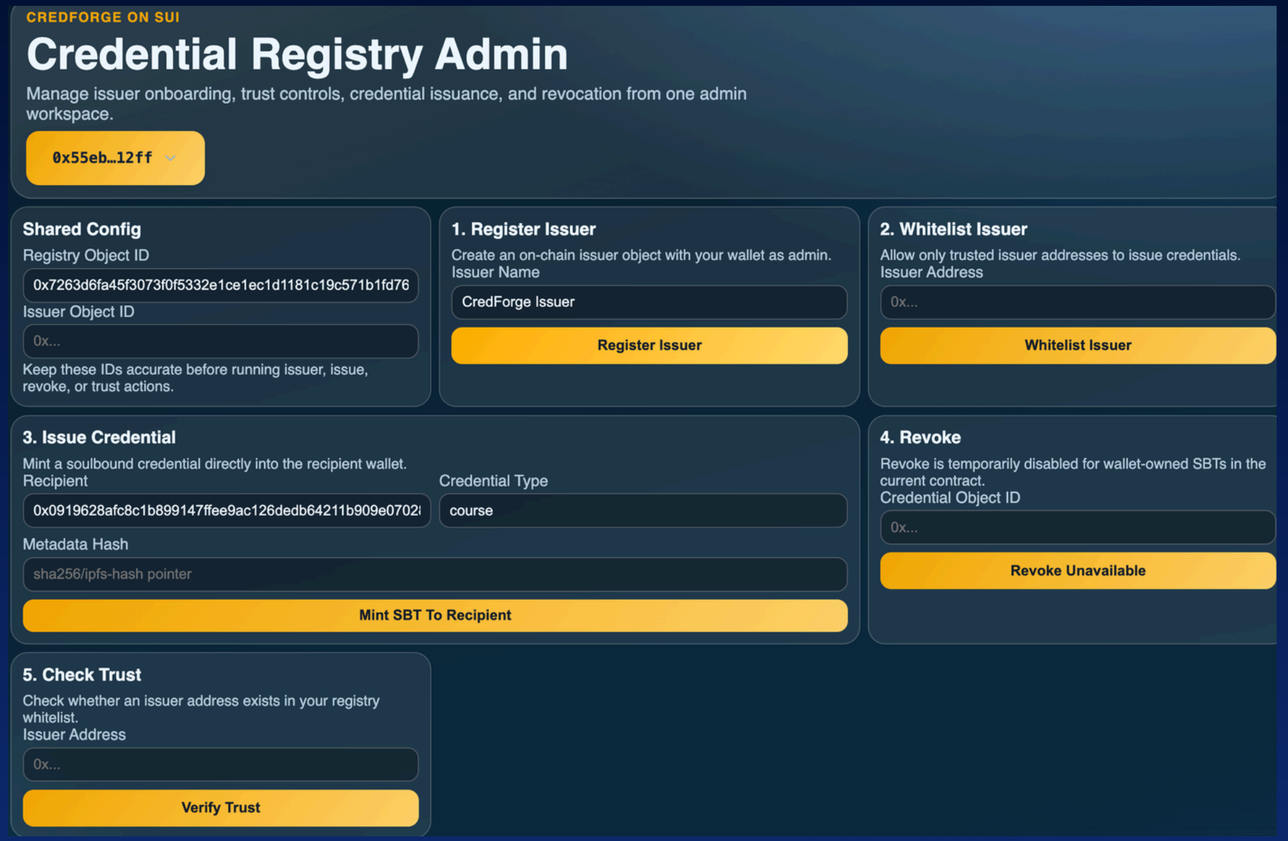
Not a platform.
Not just credentials.
A protocol where work becomes proof.

CREDFORGE

Your Credentials Onchain

Sign in with Google to view your Sui credentials and verify trusted issuers. Welcome to CredForge. Sign in to access your wallet-linked credentials, preview your certificates, and verify issuer trust in one simple dashboard.

Continue with Google



Here’s how it works:

Admin whitelisted partners addresses

the partners issue cryptographic credentials (SBT)

Contributions become verifiable assets

The partners/issuer can gain a **Reputations** points

Users carry them in a wallet-based identity

Anyone can verify them—instantly

No background checks.

No “trust me bro.”

If it happened, it can be proven.

CredForge

issues soulbound credentials on Sui that are

Verifiable: anyone can check issuer trust on-chain

Portable: owned by the recipient, not locked to a platform

Instant: mint via QR scan in seconds

Tech stack

Sui **Move** smart contracts

Sui testnet / mainnet

Sui zkLogin (Google sign-in)

Enoki (sponsored gas + AA)

Next.js frontend

IPFS for certificate metadata and images

Proof of Contribution

Potential Revenue Model

We monetize trust infrastructure, not users.

Issuer SaaS

Schools, DAOs, communities pay to:

Issue credentials

Manage contributors

Access dashboards

B2B issuer plans: schools, bootcamps, events

Verification API

Companies pay per verification

Or subscribe for bulk hiring tools

Premium Identity Profiles
Advanced analytics
Reputation scoring
Visibility boosts

Enterprise Integrations
HR platforms
EdTech systems
Government programs

We become the default verification layer for human work.

Universities

Bootcamps

Web3 communities

Hackathons

High volume of contributions, zero verification today

Anyone who does work but lacks formal proof

CredForge turns every credential into a trusted asset instantly verifiable, forever owned.”
